# THIS IS THE CONFIDENCE

OF A COMPANY WITH 60 YEARS EXPERIENCE

---

Airflow has been in the ventilation market in the United Kingdom since 1955. From designing fans and airflow measurement devices, we have grown into an international group renowned for our innovative approach in developing new products and techniques for moving air.

---

## WE BROUGHT YOU LOOVENT, iCON AND QUIETAIR

---

In 1969 we launched the Aidelle Loovent which has become a household name in the ventilation industry.

Over 2 million have been sold with a state of the art addition to this range in 2012.

Our next landmark product in Airflow's history was iCON with its stylish and unique patented iris shutter – the fan of choice in many refurbishments and new builds. Then we introduced the QuietAir, the quietest bathroom fan available that meets the latest Building Regulations Installed Performance requirements when ducted (QuietAir 100).

QuietAir have been awarded the prestigious QuietMark seal of approval.

NOW WE ARE TAKING YOU TO  
A NEW LEVEL, AN iCONstant LEVEL

---

The market for Decentralised Mechanical Extract Ventilation (dMEV) fans is growing, users seek a ventilation solution that will also satisfy the need for an eco friendly, economical to run and low noise fan with minimum human intervention. iCONstant helps eliminate the problems of condensation and mould growth by continuously extracting the damp, moist air that is the source of the problem.

iCONstant is the new quiet, low energy dMEV fan from Airflow.

## CUTTING EDGE TECHNOLOGY AND DESIGN

---

The iCONstant has an option of an intelligent humidity sensor which ensures the boost speed energy consumption is kept to a minimum and reduced noise levels are achieved whilst ensuring optimum ventilation at all times. The fan is also fitted with a flow sensor which ensures the fan maintains a constant extraction rate under all conditions – no need for any human intervention. The unique setup diagnostic LED light assists installers in the setting up process making it quick and easy to install. iCONstant is also SAP Appendix Q eligible which makes the product ideal for the newbuild market.

---

## FOR YOU AND THOSE AROUND YOU

---

iCONstant has been developed to consume minimal energy by using a highly efficient DC motor. The motor draws a mere 1.07w on the trickle speed of 6 l/sec. The yearly running cost of the iCONstant is less than that of a low energy light bulb. The fan is incredibly safe to operate being the only trickle fan to achieve full IPX5 rating for both wall and ceiling installations. This means the fan can be installed anywhere in Zones 1 and 2 of your bathroom/ en-suite.

The fan also has an optional pull cord to boost it if required.

---

iCONstant's circular design is based on our very successful iCON brand of extractor fans. Just one of a range of innovative and inspirational products designed and produced by Airflow over the last 60 years. From a quiet, low energy extractor fan to a complete ventilation system which reclaims over 90% of wasted heat in a residential or commercial building. You can trust in Airflow to deliver a healthier indoor environment.
